A&D Company, Ltd.

A&D Receives Frost & Sullivan's 2026 Company of the Year Award in the Global Home Monitoring Technologies Sector

A&D Company, Ltd. (Headquarters: Toshima-ku, Tokyo; President and CEO: Yasunobu Morishima) has received the 2026 Company of the Year Award in the Global Home Monitoring Technologies sector as part of the 2026 Best Practices Awards presented by the global market research and consulting firm Frost & Sullivan.

1. Frost & Sullivan Best Practices Awards

The Frost & Sullivan Best Practices Awards program recognizes outstanding companies across industries and regions worldwide, evaluating them from multiple perspectives including market leadership, technological innovation, customer value, and growth strategies. Among these awards, the Company of the Year Award is one of the highest honors, presented to organizations that make significant contributions to industry advancement while delivering exceptional products and customer value.

2. Reasons for the Award

Established Expertise in Measurement Technology

Building on nearly 50 years of measurement technology expertise, A&D provides health measurement devices such as blood pressure monitors and body weight scales, together with services that support the recording and sharing of measurement data.

Highly Rated Technology and Support Capabilities

Frost & Sullivan highly evaluated A&D's clinically validated measurement technologies, its connectivity with advanced healthcare and health management systems including A&D Connected Solutions (ACS), and its scalable Remote Patient Monitoring (RPM) capabilities. These solutions deliver value to both users and healthcare professionals. RPM enables healthcare providers to remotely review health data measured at home or other locations and utilize it for patient health management.

Reducing User Burden Through Automatic Data Transmission

A&D's Cellular Blood Pressure Monitor (UA-1020CEL) automatically transmits readings using LPWA (Low Power Wide Area) cellular communication technology. Because it does not require a smartphone, mobile application, or Wi-Fi connection, it is easy to use even for elderly users and individuals unfamiliar with digital devices. This helps reduce technical barriers to the adoption of Remote Patient Monitoring. The device contributes to higher patient engagement and data collection rates in RPM programs while enabling healthcare providers to manage health data for a broader range of patients.

Centralized Health Data Management

The A&D Heart Track healthcare application integrates with A&D devices that support Bluetooth wireless communication and centrally manages data such as blood pressure, body weight, blood oxygen saturation (SpO_2), and body composition. By enabling data sharing with healthcare professionals, the app supports everyday health management.

Comprehensive Support From Deployment Through Operation

A&D also provides management systems that monitor device operational status and technical support services that facilitate integration with healthcare institution systems. This comprehensive combination of products, services, and operational support was recognized by Frost & Sullivan, leading to A&D's selection as the 2026 Company of the Year in the global home monitoring technologies sector.

3. Related Products

Cellular Blood Pressure Monitor "UA-1020CEL"

The UA-1020CEL is a cellular blood pressure monitor that automatically transmits measurement data without requiring a smartphone or Wi-Fi connection. It features irregular heartbeat (IHB) detection and body movement detection functions, supporting both Remote Patient Monitoring (RPM) programs and home healthcare management. The device has been validated in

accordance with ISO 81060-2:2018+A1:2020 and is listed in the U.S. Validated Device Listing (VDL).

* Available only in the North American market.

Healthcare App "A&D Heart Track"

A&D Heart Track is a healthcare application that integrates with Bluetooth-enabled A&D healthcare devices to allow central management of measurement data including blood pressure, body weight, body composition, and blood oxygen saturation. The app supports trend tracking, report generation, and integration with Apple Health and Google Fit, helping users manage their health on a daily basis.

* Available only in the North American market.
